

CODEGRAPH

CodeGraph Integration — Helix Cluster OS

Field	Value
Revision	1
Created	2026-05-30
Last modified	2026-05-30T20:43:00Z
Status	active

Overview

This project uses [CodeGraph](#) (@colbymchenry/codegraph) as its local semantic code-knowledge graph. CodeGraph is mandated by the Helix Constitution §11.4.78 and §11.4.79 for all AI-agent-driven projects.

Installation

```
npm install -g @colbymchenry/codegraph
```

Initialization & Indexing

```
cd /Users/milosvasic/Projects/HelixCluster
codegraph init
codegraph index
```

Configuration

.codegraph/config.json controls inclusion/exclusion:

- **Included:** all project source files.
- **Excluded:** third-party dependencies, credential/secret paths, build artifacts, cache, temp files.

- **Submodule policy:** own-org submodules (vasic-digital/*, HelixDevelopment/*) are indexed; third-party submodules are excluded.

Status

`codegraph status`

Current index (as of 2026-05-30): - Files: 348 - Nodes: 5,914 - Edges: 15,756 - Languages: Go (328), YAML (16), Python (3), C (1)

MCP Wiring

`codegraph serve --mcp`

For Qwen Code, add to `.qwen/settings.json`:

```
{
  "mcpServers": {
    "codegraph": {
      "command": "codegraph",
      "args": ["serve", "--mcp", "--scope", "project", "--transport", "stdio"]
    }
  }
}
```

Regeneration Mechanism

The CodeGraph database is gitignored (`.codegraph/.gitignore`). To regenerate on a fresh clone:

`codegraph init && codegraph index`

This satisfies Constitution §11.4.77 (regeneration-mechanism-required mandate).

Anti-Bluff Verification

- `codegraph status` MUST report >0 files, >0 nodes, >0 edges.
- Symbol resolution MUST succeed for at least one symbol from an own-org submodule.
- Paired mutation test: temporarily exclude an own-org submodule path → validate FAILs → restore.

References

- Constitution §11.4.78 — CodeGraph code-intelligence mandate
- Constitution §11.4.79 — Own-org submodules MUST be included in the index

- Constitution §11.4.80 — Regular update + sync automation mandate
